

COLOR INSERT GUIDE

Below and on the following pages are specs and template links for you to use when setting up your color insert file.

Our file format requirements are as follows for full-color printing:

- Vector Art - saved no higher than Illustrator CS3 with all fonts converted to outlines or in InDesign CS5 with all components collected for output.
- Raster Art - saved as high resolution (no less than 300 dpi)
- Print PDF - high quality print file with no printers marks.

For full-color files that are being printed digitally, please note that our digital press is not meant to print PMS colors or exact matches like an offset press would. We have limited control in the change in output of color and have experienced color variations, especially with blues printing in more of a purple hue. However, our in-house color specialist reviews every full-color order previous to production to help ensure accuracy. We also offer physical product proofs, please contact the factory for details.
